

Frustrated at the cost of your phone calls?

G7Eleven has the solution for you!

Voice over IP

The G7Eleven VoIP system allows a business to make and receive all telephone calls through an internet connection, removing the requirement for an expensive fixed land line.

"At G7eleven we are very busy converting hotels and other small to medium sized businesses from expensive fixed line operator systems to VoIP. In today's climate the savings are hard to ignore and most hotel managers are very interested in understanding how this can work for them". We are presently converting two major hotel groups to the G7Eleven VoIP platform". Nick Whittome, Director G7Eleven

Irish Owned

G7eleven is an Irish owned company that is providing innovative VoIP solutions to all businesses helping them to break free from high fixed line rental and mobile costs. G7Eleven was set up as the result of two IT business owners putting their heads together and seeing that in Ireland, there was a distinct lack of professional, technically minded, reliable IP phone system providers. On top of that, there was also no reliable, cost effective VoIP trunk provider. For this reason, Shane Hartigan and Nick Whittome established G7Eleven to tackle these problems and to finally provide a total solution for companies throughout Ireland. It's time for G7Eleven, its time for New Thinking.

Save Money

By moving to a G7 Eleven VoIP system you will instantly eliminate the rental cost of Primary, Basic or PSTN line rental, in some cases this can be €300 or more per month. Up to 50% savings can also be achieved on all outbound phone calls.

Technical Expertise

G7eleven engineers are technically proficient with over 20 years of combined IT/wireless project experience, certified in MikroTik, Cisco and Microsoft technologies. They also boast significant in depth knowledge of VoIP system implementation and network management.

Personal Customer service

You can be safe in the knowledge that an in-house customer support member will personally respond to any issue that may arise in under 4 hours, or immediately if business critical. Through the easy to navigate client login area all customers will also have full access to all billing and call activity details.

G7ELEVEN

NEW THINKING

Remote Access

G7Eleven's internal systems allow their engineers to remotely login to a customer's site in order to resolve any issues and minimise any disruption that may be caused.

Customer testimonials

"We recently moved offices and were looking for a more cost effective telecoms solution and decided to move to the 3CX Windows PBX using the G7Eleven VoIP trunking service. We can now monitor all inbound and outbound call activity from our PC's and have also achieved significant cost savings. G7Eleven installed this system seamlessly and we are very pleased with the results achieved to date."

Donagh Madigan M&C Property Management

"We recently brought 2 separate doctors surgeries together into one and moved from an antiquated phone system to the most advanced telecom and VoIP system on the market. G7Eleven provided us with amazing customer support and set up of systems and we are now reaping the rewards with reduced phone bills and no fixed line rental."

Niamh Cashel Healthcare

TRY IT NOW FOR FREE

It's really simple a technical engineer will install a conversion unit allowing outbound calls to be made through the G7Eleven VoIP trunk. All inbound calls will remain with your current service provider. During the trial there is no financial commitment other than the cost of the outgoing calls. Following on from a successful trial G7Eleven will port your inbound calls which will immediately cease your requirement for a primary rate line.

"We will arrive on site and within 5 minutes we can achieve outbound calls via VoIP without any interference to your existing phone system," Shane Hartigan, Director G7Eleven

Case Study: The Gibson Hotel

Technology is advancing at an alarming rate and for many hotel and restaurant establishments it can be difficult to keep up with trends. At the Gibson Hotel in Point Village Dublin, IT guru Peter O'Shea, Head-Technician for The Gibson Hotel Group, has found a solution to this problem by introducing a novel and technologically advanced system which adopts the same principles used by network operators today, but works at a speed ten times faster than the standard connection. Using optical fiber wiring; a glass cable used to bounce signals, the hotel can now run a guaranteed uptime speed of 99.999%. That is to say that the fiber cable can run up to one gigabit in download speed in comparison to the 10 megabits produced by copper wiring.

The Gibson Hotel uses VOIP; Voice Over Internet Protocol. Similar to the programme Skype, with VOIP all local calls between hotels are free, as they are effectively one internal system in all hotels. This has returned a 50-60% savings on calls. This entire infrastructure was installed by a company called G7 Eleven who understood the requirements needed from the get go. "G7Eleven are a highly

technically skilled company providing VoIP solutions and have seamlessly converted our existing telephone system to the VoIP platform. This has proven extremely cost effective to The Gibson hotel. In addition to these savings G7Eleven offer first class customer service and are very responsive to our needs" stated Peter

During President Obama's visit to Dublin the White House entourage was situated at The Gibson Hotel Point Village. They had requested 40 external telephone lines and The Gibson Hotel was the only establishment in Dublin with the capacity to provide this set-up. "I contacted G.7 Eleven, our providers, who set up the billing system, individual lines, and the whole lot. All we had to buy were 40 VOIP handsets and we were able to provide the party with their own independent phone system, each with their own personal phone number at the hotel with nothing passing through reception." explains Peter O'Shea. The system worked without a single hitch and at the end of their stay, members of the White House delegation were amazed when they received their bill, an extremely economical rate.

The Gibson Hotel has played host to a number of large conventions, including a conference for Google which supported 450 users online with rapid download/upload speeds and without fail.

There is also only one point of contact. Resolving issues, if a problem with the system does arise, is now easier and cheaper. Traditionally a typical hotel establishment would have to monitor line rental, two internet circuits- one for the hotel mainframe and the other for the guests, and an Eircom Business IP line for data. This no longer exists. Just one monthly charge for fiber and just one provider is cost-effective, reliable and straightforward.

It is particularly beneficial to corporate customers, explains Charlie Sheil, General Manager of The Gibson Hotel Dublin. "Many will work from their room but occasionally they may come down to the bar for a pint or a bite to eat. With their laptops they can connect from anywhere with the same reliability and speed. Sort of like a home from home." ○
